

## **Space Weather Forecasting**

### **Measurement and Modeling Requirements**

**Living with a Star Measurements Workshop  
NASA Goddard Space Center**

**February 9-10, 2000**

**Gary Heckman**

**NOAA Space Environment Center**

## SEC Users

Aviation Aerospace industry Biological systems Education

**Space Weather  
Domain**

**Ionosphere**

**Geomagnetic field**

**Atmospheric  
density**

**Energetic particle  
environment**

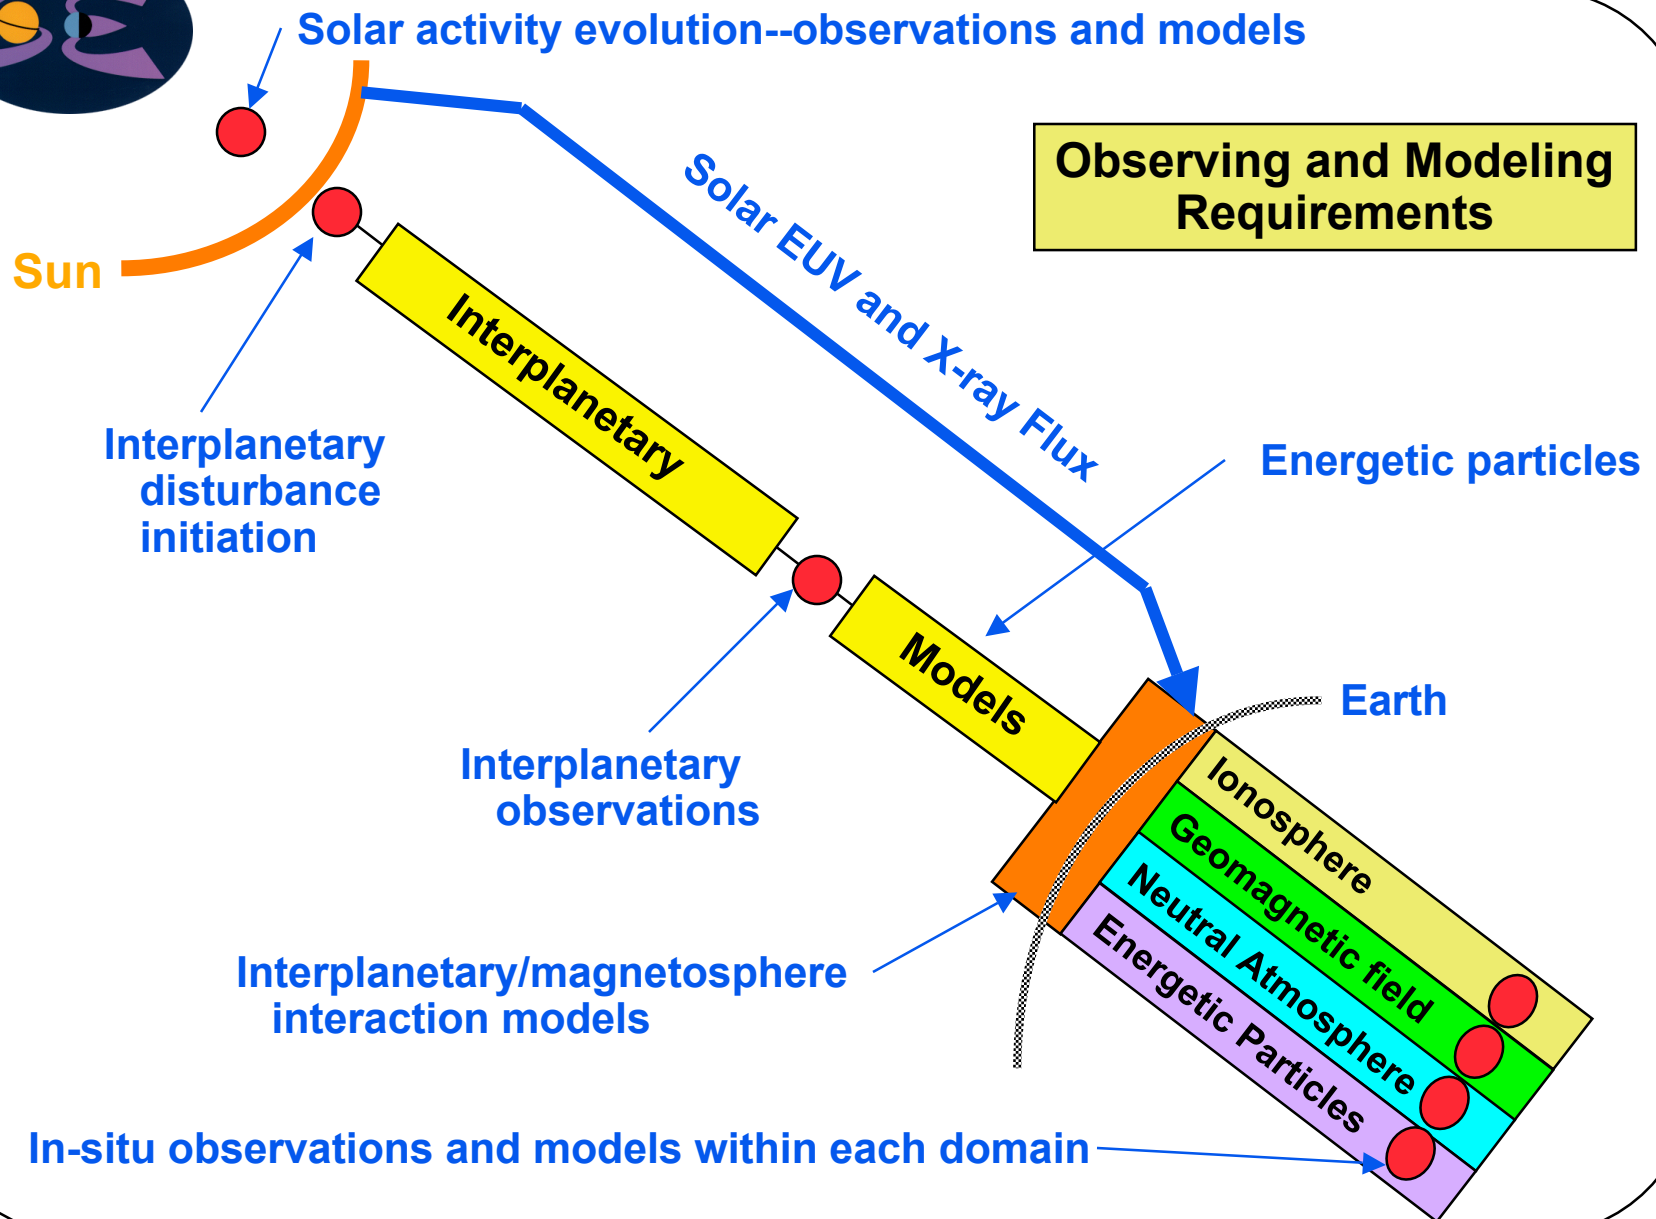

## Products

- ⊙ **Forecasts (text and models) (1-3 days, month, years)**
- ⊙ **Alerts (right now)**
- ⊙ **Warnings (up to one hour)**
- ⊙ **Watches (up to one hour)**
- ⊙ **Advisories**
- ⊙ **Specification (text and models) (right now)**
- ⊙ **Measurements and indices (right now to a few hours)**

## Verification is a critical function

### Forecasting Geomagnetic Storms Verification

		Currently Observed	
		No Storm	Storm
Forecast	No Storm	2498	59
	Storm $A_p' > 50$	38	20
One-day Forecasts; 1989 – 1995			

		with ACE (real-time solar wind data) Observed	
		No Storm	Storm
With Warning	No Storm	2498	~ 0
	Storm $A_p' > 50$	~ 0	79
One-hour Warnings; Expected			

## Solar Measurement Priorities

- CME initiation in 3 dimensions to drive interplanetary models
  - Direction
  - Radial velocity
  - Structure and configuration
- Coronal Holes—observation and prediction of Earth impact
- EUV/X-ray flux—observation and prediction
- Evidence of energetic particle acceleration and interplanetary injection
- X-ray flares and radio bursts—observation and forecasting
- Evolution of active structures--prediction
- Cycle evolution--prediction

## Space Weather Operational Models

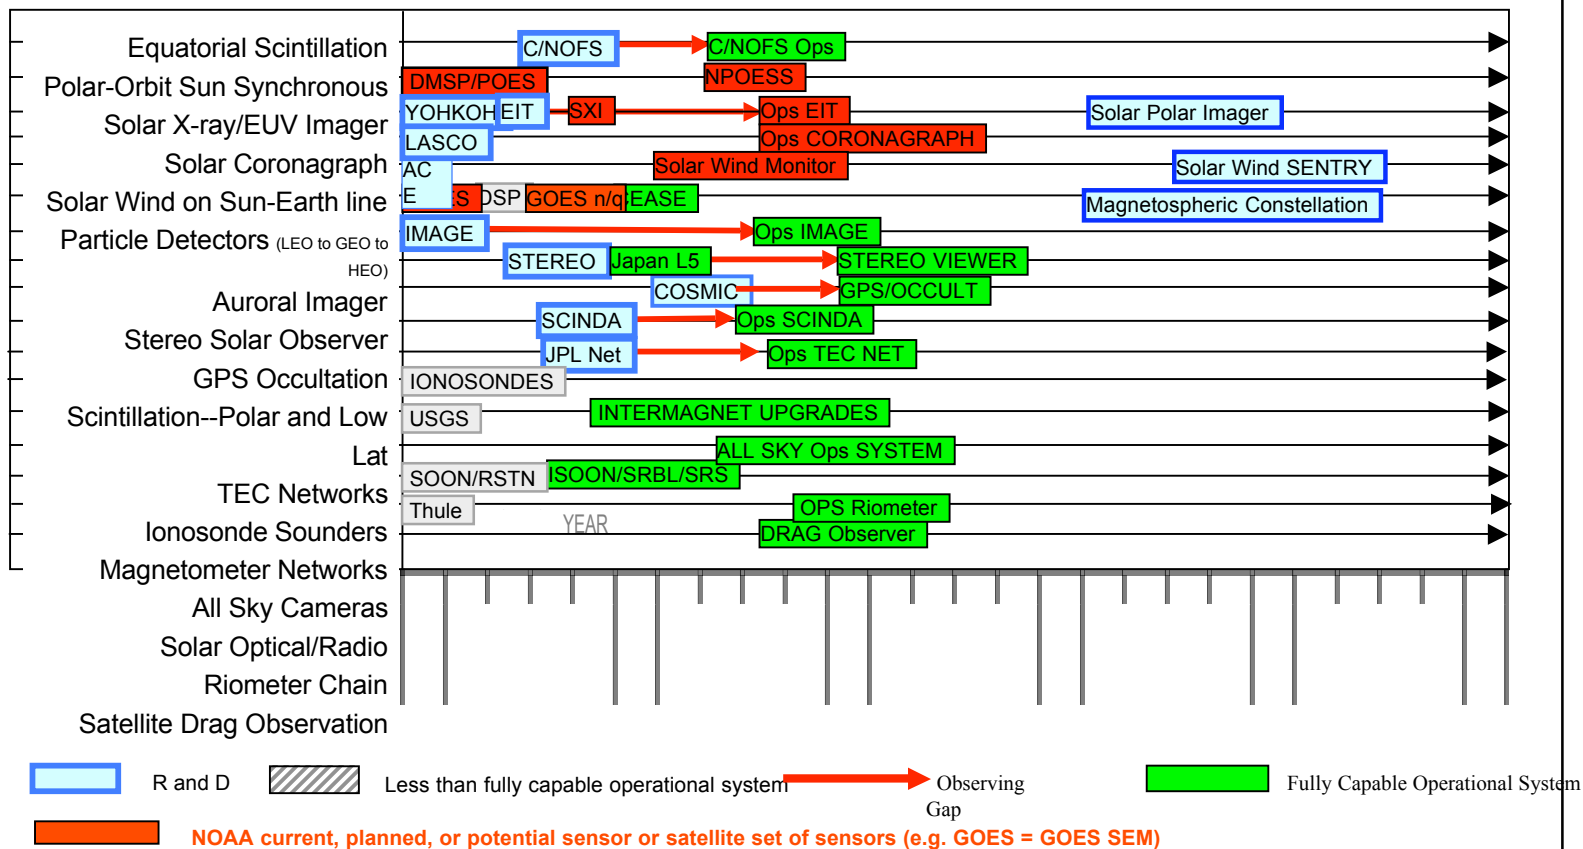

R and D
Less than fully capable operational system
→ Observing Gap
 Fully Capable Operational System
Planned but doubt about deployment
Early stages of definition or distance into future lessens confidence of deployment, or no funding

INT CENTER

## Space Weather Operational Sensors Timeline

## New Operational Measurement Priorities

- ⦿ Provide quantities that meet user priorities
- ⦿ Information to fill weak links in Sun-Earth propagation
- ⦿ Model drivers
- ⦿ Information that provides most reliable forecasts or model input has higher rank
